

2009 International Agents Conference - Record sales announced -

Berlin, January 2009 – Over a dozen languages and countries were represented at CMC-KUHNKE's first annual International Agents Conference. Agents from around the globe gathered at the new wing of CMC-KUHNKE's production facility in Berlin, Germany for the 2-day conference.

Agents were introduced to exciting and innovative products to be released in 2009, reviewed the latest product and software developments, and outlined the marketing plan for the year ahead. This annual event is one key element in CMC-KUHNKE's drive to maintain its position as the global leader in quality control for metal packaging.

2008 A Record Year

The meeting also allowed for a review of the past year's successes, including another record year for sales around the world. This growth was attributed to the addition of new products, significant sales of the MARS line of fully-automated gauges, and the continued expansion in emerging markets such as Eastern Europe and Latin America.

A New Look!

Chicago, November 2008 - CMC-KUHNKE used the PackExpo show, Nov. 9-13 to not only showcase their latest inspection systems but to unveil their new marketing campaign. A sexy, new booth and slogan mirror the recent redesign of their website which aims for an even easier and more satisfying browsing experience. The new design helped attract interest to their exhibit of cutting edge seam inspection systems and the Ringmaster ring measurement system.

CMC-KUHNKE, Inc
1060 Broadway
Albany, NY 12204

2008 NEW PRODUCT DEVELOPMENTS

DFW-3000

New Film Weight Gauge
Improves Coating Process
Control

Outstanding repeatability, ease-of-use and flexibility are at the core of new features available on the brand new DFW-3000 Digital Film Weight Gauge from CMC-KUHNKE. With the improved accuracy of your film weight measurements, facilities can reduce lacquer consumption and spoilage, all while improving product quality and operating efficiencies.

The DFW-3000 also features a redesigned probe for measuring blanks. Gliding on a cushion of air, the Easy Probe effortlessly and effectively measures your sample with outstanding accuracy and world class repeatability. Designed to apply the perfect amount of pressure, the operator easily guides the probe to the desired location for measurement where the gauge sits under its own weight applying a constant measurement pressure.

FESG-1000 - Front End Set up Gauge

A robust new alternative to manual front-end measurements is now available from CMC-KUHNKE. First the can is measured for Top & Mid Wall Thickness and then placed on the measuring table. At the touch of a key, the gauge automatically measures trimmed can height & dome depth.

Now available for 2 piece food cans!

ENR-16 - 16 Station Enamel Rater

The new 16 Station enamel rater allows for the swift testing of up to 16 Ends, Crowns, or Twist Off Caps. The enamel rater works in conjunction with either 8 or 16 end holders. The unit is self regulating, constantly controls and displaying: contact control, vacuum, cable connections and the testing voltage of 6.3V.

The new 16 station enamel rater is now available for use with Crown Caps. **Crowns are tested on both the inside and the outside!**

2008 NEW PRODUCT DEVELOPMENTS

ABT-1000 - Aerosol Burst Tester

The Aerosol Can Burst Tester is a semi-automated burst / buckle tester designed to check first the pressure at which the aerosol can end will buckle, and then the pressure at which the aerosol can will burst.

New Features added:

- ü Optional water recirculation tank (shown)
- ü Available for monobloc aerosol cans and aluminum bottles
- ü Onscreen graphing of pressure over time

ENR-3000 Digital Enamel Rater

The new 3000 series is the latest model in CMC-KUHNKE's long line of semi-automatic enamel raters. The digital ENR-3000 features automatic starting of the

measurement process, fill level control, completely customizable tests and setup [objects, specs, lines, operator etc] and much more

Accessories are available to allow testing of beverage, food & aerosol cans and ends, as well as side seam testing and tube testing.

VSI-5000 Series High Resolution Video Seam Imager

CMC-KUHNKE has long been a leading innovator in double seam inspection technology, and pushed the envelope further with the release of their new VSI-5000 series high resolution, USB or fire-wire-ready, seam imagers.

These gauges produce crystal clear digital images for cross-sectional double seam analysis. The USB connection eliminates potential compatibility issues that have arisen between the new generation of smaller tower profiles and PCI Image Capture cards.
